DETAILED ACTION

Claim Objections

Claims 1-18 are objected to because of the following informalities: in claims 1, 4, 7, 10, 13 and 16 " $\cos \theta$ " should be changed to $-\cos \alpha$. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claimed invention requires each of the at least two scanning beam focusing mechanisms satisfying the inequality $\Delta L \cos \alpha > R/2$ (claims 1, 4, 7, 10, 13, 16); however, the specification fails to adequately teach how to make the scanning beam focusing mechanisms which satisfy the inequality. There are no numerical data, i.e. radius of curvature of each surface of each lens/mirror, the refractive index of each lens/mirror, the spacings between optical elements, etc., provided for the scanning beam focusing mechanisms. Without the numerical data for the scanning beam focusing mechanisms, how can one make the scanning beam focusing mechanisms which satisfy the claimed inequality without undue experimentation?
